Mission & Vision

Our Services

Cyber Security is the body of technologies, processes and practices designed to protect networks, computers, programs and data from attack, damage or unauthorized access.

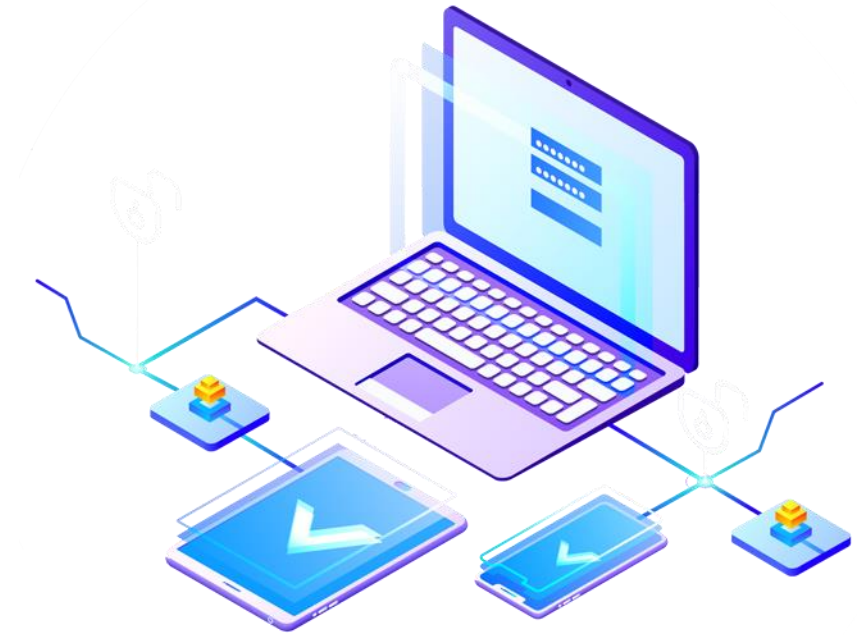

○ Vulnerability Assessment

- A vulnerability assessment is the process of defining, identifying, classifying and prioritizing vulnerabilities in computer systems, applications and network infrastructures.
- GS2 Cyber Security offers its customers a comprehensive evaluation to expose vulnerability in IT infrastructure before they can be exploited.

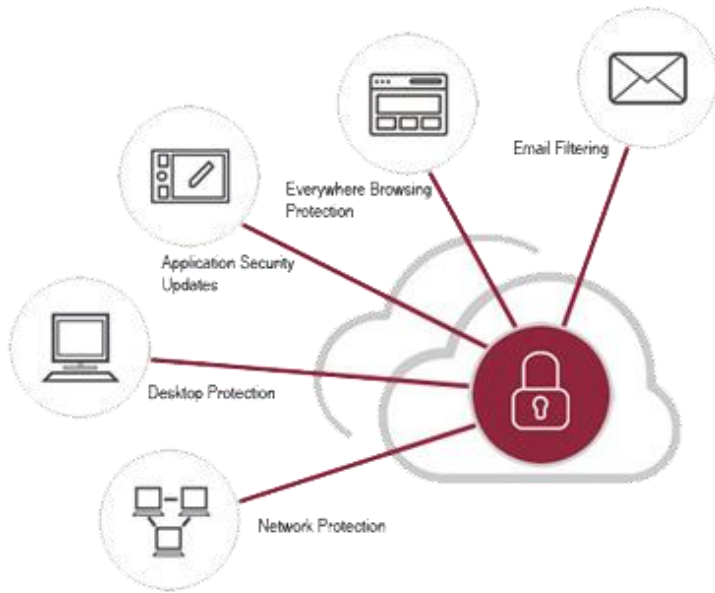

○ Next Generation Firewall

- A Next-Generation Firewall (NGFW) is a part of the third generation of firewall technology combining a traditional firewall with other network device filtering functionalities, such as an application firewall using in-line deep packet inspection (DPI), an intrusion prevention system (IPS)

○ UTM Solutions

- Unified threat management (UTM) consolidates multiple security and networking functions with one unified appliance that protects businesses and simplifies infrastructure. Simplified security and networking capabilities in one box reduces the risk of cyber threats, enables cloud access, and frees resources, enabling business leaders to focus on what matters most revenue growth and profitability.

○ Security Fabric For Business & Enterprises

- GS2 Cyber Security provides security services for all parts of the network and infrastructure that are designed to work together as a single, integrated Security Fabric to protect against sophisticated threats.

○ Penetration Testing

- Penetration Testing helps organizations meet compliance requirements and uncover security risks. A great proactive approach to managing your company's network security can be penetration testing. A penetration test can help show how an attacker would gain unauthorized access to your environment through your email systems, firewalls, VPN tunnels, web servers and other network devices.

○ Cyber Threat Intelligence Services

- Cyber Threat Intelligence Services design and build cyber threat intelligence (CTI) processes and solutions within your security operations to optimize your ability to consume, analyze and apply threat intelligence to protect the business. Our services focus on strategic planning, threat communications, technical solutions and workforce expertise required to implement an intelligence-driven cyber security program.
